NEWSLETTER – October 2026 No. 166

Whispers from the Chair

Whew, what a month it has been and I thought August leading up to the AGM was busy.

I must admit that I was very relieved that we commence the September year with a full committee. We are still doing a bit of reallocating the member's responsibilities and getting the new Treasurer (Ron) up to speed. It was fortunate that the old committee members still wanted to retain their previous responsibilities and are aware that, as from the AGM they are now limited to holding those responsibilities for 3 years when, if they want to stay on the committee, they must swap their role for another.

Following the AGM, and partially to improve communication between myself and the members of MSK and to help me get more opinions on the various Governance and Risk aspects of running the shed, I have introduced a nine-member non-committee Chat group who meet monthly in the amenities space. Anyone who is interested may listen to our discussions but remember what we talk about is just a chat session and not a decision-making body. Decisions are made by the committee. The September meeting mainly discussed issues that arose at the AGM and moved into what future discussion items we could get into including where we see MSK being in 10 years' time, future proofing the MSK operation, risk management, etc.

I would be keen to receive propositions on new revenue producing opportunities that we could introduce to spread our shed income over a wider range of activities. MSK are not allowed to directly compete with local businesses so keep that in mind.

If you have something in mind, write up your proposition and submit it to the committee.

As part of securing the MSK future and with continually raising costs, this year we will be doing increased monitoring of our income sources and their costs. Our new accounting software allows this to be done but it also involves a bit of work to narrow down what we should be measuring.

You will notice that we have been expanding the availability of the compressed airline system and that we have also purchased a small mobile safety scaffold for use around our site. An up-and-coming project is to reduce the amount of dust we create in the workshops. It will be quite a big project but it is important for all our members' health, not only for the guy doing the work but also for those working on benches in the vicinity.

I am looking forward to the MSK garage sale and echo Trevor's request for helpers hopefully we will have enough goods coming in to sustain two events per year.

Chairman Mick

Upcoming events

Just a memory jog of what Menzshed Activities are happening in the foreseeable future.

Make sure you have them in your own Diary.

Event	Date	Where	Comment
Garage Sale	Saturday 17 October 2026	Shed	Be there or be square
Recurring Events			
Sharpening tools	Last Thursday of Month	@ the Shed - regular event	By Ray Y 
Electric watch battery replacement	Second Tuesday of the Month	@ the Shed – regular event	Mick Mc will be bringing his wristwatch tools to replace batteries for a small charge 
Fresh Scones	Last Thursday of Month and whenever there is a birthday shout or any other excuse!	@the Shed – a fairly regular event	Hans and his apprentices will be producing superb scones fresh from the oven, or for anyone's birthday shout 
PLEASE NOTE One of the uses of the morning sign in is to record who is at the shed in case of a fire. If you leave early or on an errand please just tell someone so we don't have to search for you, that is if you have signed in legibly! All you have to say is "I'm Off"

The AGM

ED. Rather than just incorporate the whole minutes of the AGM in this newsletter I have added a precis of the main points. If you need more information copies of the AGM minutes are available from the office.

Discussion on which elements of the Society's financial resources could be used to fund its operating costs

- **Operating Costs and Charity Laws:** Tony Annandale highlighted that the boundary between charity-compliant and non-compliant operational funding is vague, arguing it is harsh to require essential costs like first-aider training and insurance to be funded strictly from membership fees rather than earnings.
- **Treasurer's Perspective & De-registration:** The treasurer stated an objective to eliminate the operating deficit and emphasized the Society's statutory duty to the community, noting an alternative of de-registering as a charity to become a tax-paying incorporated society with little change to membership fees.
- **Debate on Subscriptions and Overheads:** Divergent views emerged regarding whether members—who are part of the broader community—should bear operating overheads exclusively through subscriptions, or if non-subscription income (such as commercial activities) could be utilized.
- **Compliance and Legal Advice:** While members disagreed on what is lawful, the Chairman shared pro bono legal advice indicating that MSK's current approach is compliant, while also acknowledging that a more limited, liberal use of non-membership earnings is possible.

2026 /27 Subscriptions

- **Subscription Recommendation:** The Chairman explained that the Committee recommended setting 2026/27 subscriptions at \$75.00 plus GST (\$86.00) to account for rising costs, a new \$5.00 per member capitation fee to MenzShed NZ, and GST liability, noting a stand-still fee would require at least \$67.00 including GST.
- **Motion Amendment and Outcome:** Despite opposition from Cliff Daly and some members against the Committee's \$75 plus GST proposal, an amended motion moved by Roger Hayman and seconded by Robbie McKee—proposing a subscription of \$70.00 including GST—was carried.
- **Call for Further Legal Advice:** Following the vote, Roger Hayman expressed concern that the Committee had relied on equivocal pro bono legal advice regarding compliance matters and suggested seeking further professional guidance.

Interest Register

- **Requirement:** The secretary noted that the new constitution mandates maintaining a register of Officers' interests and managing any resulting conflicts.
- **Current Status:** An Interests Register has been established for potential or perceived conflicts involving officers, and no conflicts arose over the past year.

Election of officers

- The following people were elected as officers of the shed: Roger Buchanan, Allan Cannell, Frank Easton, Michael Edwards, Douglas McCrone, Trevor McIntyre, Michael McKelvie, Ron McNulty and Noel Turchie. Their positions to be decided by the committee.

General Business

- **Sick Bay:** Establishing a sick bay is a priority for the incoming committee after previous delays.
- **Parking Bay Flooding:** KCDC support for parking area flooding has been deferred to the next financial year, though a soak pit remains a high priority.
- **Compliance and Insurance:** A Code of Compliance certificate for rear groundwork will be prioritized once the makerspace building is finished, with no anticipated issues from KCDC, and John Moriarty confirmed all MSK assets are insured.
- **Vote of Thanks:** Tony Annandale requested a show of appreciation for the Committee's work in keeping MSK operating effectively, which was met with applause.

Not AGM! Just things to ponder

- Being popular on Facebook is like sitting at the 'cool table' in the cafeteria of a mental hospital.
- I too was once a male trapped in a female body...but then my mother gave birth.
- If only vegetables smelled as good as bacon.
- When I lost the fingers on my right hand in a freak accident, I asked the doctor if I would still be able to write with it. He said, "Probably, but I wouldn't count on it."
- I woke up this morning determined to drink less, eat right, and exercise. But that was four hours ago when I was younger and full of hope.
- Anyone who says their wedding was the best day of their life has clearly never had two candy bars fall down at once from a vending machine.
- We live in a time where intelligent people are silenced so that stupid people won't be offended.
- The biggest joke on mankind is that computers have begun asking humans to prove they aren't a robot.
- When a kid says "Daddy, I want mommy" that's the kid version of "I'd like to speak to your supervisor".
- It's weird being the same age as old people.
- Just once, I want a username and password prompt to say CLOSE ENOUGH.
- Last night the internet stopped working so I spent a few hours with my family. They seem like good people.
- You know you are getting old when friends with benefits means having someone who can drive at night.
- Weight loss goal: To be able to clip my toenails and breathe at the same time.
- After watching how some people wore their masks, I understand why contraception fails.
- Some of my friends exercise every day. Meanwhile I am watching a show I don't like because the remote fell on the floor.
- For those of you that don't want Alexa or Siri listening in on your conversation, they are making a male version....it doesn't listen to anything.
- I just got a present labelled, 'From Mom and Dad', and I know darn well Dad has no idea what's inside.

Around the Shed

The workshop vacuum cleaner completely full and it's filter filter blocked, (it's been partly cleaned to show the difference). It works much better when it has been emptied!! If it's not cleaning properly please empty and clean it.

Childhood Injuries

fell off my bike
fell out of a tree
twisted my ancle

Adult Injuries

slept wrong
sat too long
sneezed too hard

Another repair job for the toy library, someone thought it was a climbing frame and some parts had been unduly stressed!

- There's a fine line between a numerator and a denominator. Only a fraction of people will find this funny.
- Reading gives us someplace to go when we have to stay where we are.
- I have many hidden talents. I just wish I could remember where I hid them

Tony A has recently refixed a pottery donkey's tail at the shed. He has recently been seen walking around carrying a donkey to remind him of his success and patience!

We got two plywood reindeer cut out by lazer kindly done for free by **Specialised Washers & Gaskets on Riverbank Road in Otaki**. It only took 10.5 minutes to cut each one out. Many thanks

We now have compressed air supplies for tools in the PB workshop fed from overhead cassettes. Many thanks to Doug McC, Noel T & Trevor McI

Croquet pegs / posts turned and painted with coloured bands. They are in a frame so they can dry without touching and are easier to handle. By Roger C, Ian P did the turning.

A work of art challenge for the wood turners – it's only 900mm diameter and 200 thick! But it sold for \$4,000.

Garden tools for cleaning in preparation for the Garage Sale.

Peter R has developed a speciality in repairing rattan seats. To fix the rattan first the old rattan has to be removed, the groove in the chair cleaned out, the rattan soaked and then fixed using wedges and cramps allowing the rattan to dry out and shrink to make a finally tightly stretched finish.

This chair was particularly difficult as there was both a convex and a concave curve in the panel. Fortunately the seat was a flat panel.

Two of the chairs are now complete so 14 chairs completed now.

A proposed new drill stand to save electricity consumption

Hans working his magic on what will become custard and raisin scrolls

A potential new member of the shed showing how to use a fret saw

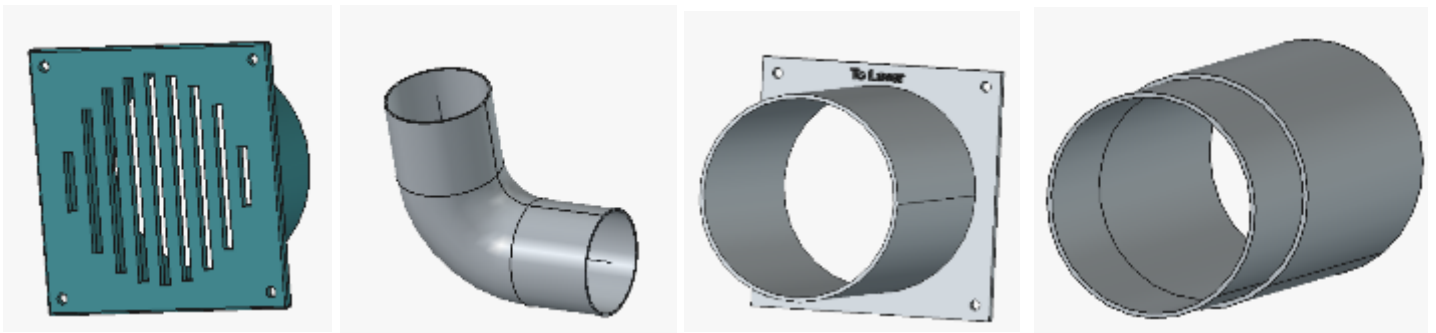

MenzShed Kapiti Makerspace: September Update

Members will have noticed steady construction of the small green shed next to the Garage and some of you will (surely) be curious to know what will be going on in there when it is finished.

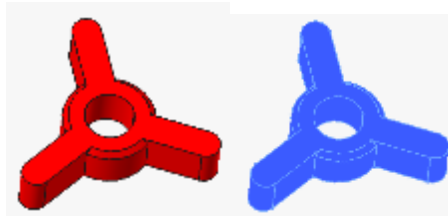

The Makerspace initiative arose from a generous donation of two 3D printers and a Carbon Dioxide Laser. Even though the shed is incomplete, a number of jobs have been completed using the donated equipment. Also, the Makerspace team has doubled in size - Peter Holness, a new member, joins the team. Peter and I have similar 3D printing and Laser cutting “kit” at our homes and we also use the same design tools. Fancy that!

What has been done in the meantime?

The new shed needed a few items for the 100mm piped fume extraction from the Laser Cutter. The Flanges, Cowls, U-Bends and Outlet Vent were all designed and then produced on the 3D printer. These items now lie under the shed and will vent fumes from the Laser to the outside.

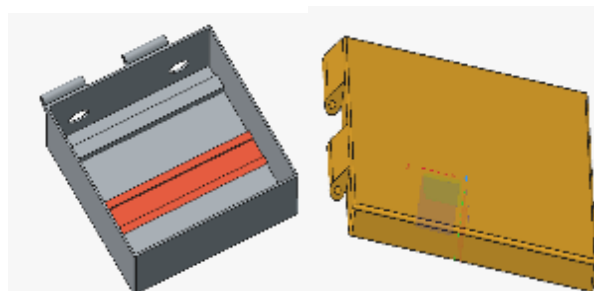

Mr Jobs (aka Frank Easton) landed some work from the Toy Library where a table-top soccer game lost a couple of spinners. With only a photo on the game’s box to guide the design, these two small plastic pieces were printed, one red & the other blue. Perfect! Job Done!

As a design exercise, a small power box was printed to hold circuit breakers and a main switch as an example of what would be needed in the new shed. In general, 3D printed parts for mains-power electrical installations are unsuitable because the materials must not only conform with Standards (such as AS/NZS 3000), but must also be certified as “fire resistant”.

The printed box features an integral DIN rail to mount electrical items and has a separate hinged lid. These parts were printed in a softer plastic, but to be fire resistant, the 3D print would need to be done with fire-resistant ABS material. Getting certification is “just too hard”.

This box will have a new home in one of the Bays where it will protect the controller for our 3-phase air compressor.

The most recent job was for a member who needed a hood to tidy-up a hole in the wall where his rangehood extractor duct exited. Peter Holness did this design and it was printed on one of the donated printers. Happy Customer!

Big thanks to Murray Cardie and his “apprentices” for construction progress so far. Similarly, big thanks to Alan Waterfield – Electrician – for the electrical work to install the Mains, outlets, lights and fan.

The next steps include lining the interior, painting the walls, terminating the electrical outlets and laying carpet tiles and, maybe, arranging a grand opening.

Please chat to either Peter or I about any potential jobs. If we can design them, they get recorded in Frank’s Job system and we go from there.

John Moriarty

Kiwi damages Nelson's plinth in London.

Just prior to his recent Europe trip, Barry Iacoppi was in correspondence with a famous YouTube London tour guide, and a full video of the guided trip is shown below.

Today he, (the guide), informed me that he had included information I had given him in his latest video on Leicester Square. Please see link below.

The whole video is of interest, but it is just after the 32-minute point that is of very special interest to me and my family. It is worth skipping to that point.

Enjoy. We did.”

Scientists recently combined the DNA of a cheetah with the DNA of a crab.

Things went sideways real fast.

A trip to the Chatham Isles

You know, no doubt, that I was missing from the shed for a week or so in September. This was I was on an organised visit to the Chatham Isles with Parkwood village.

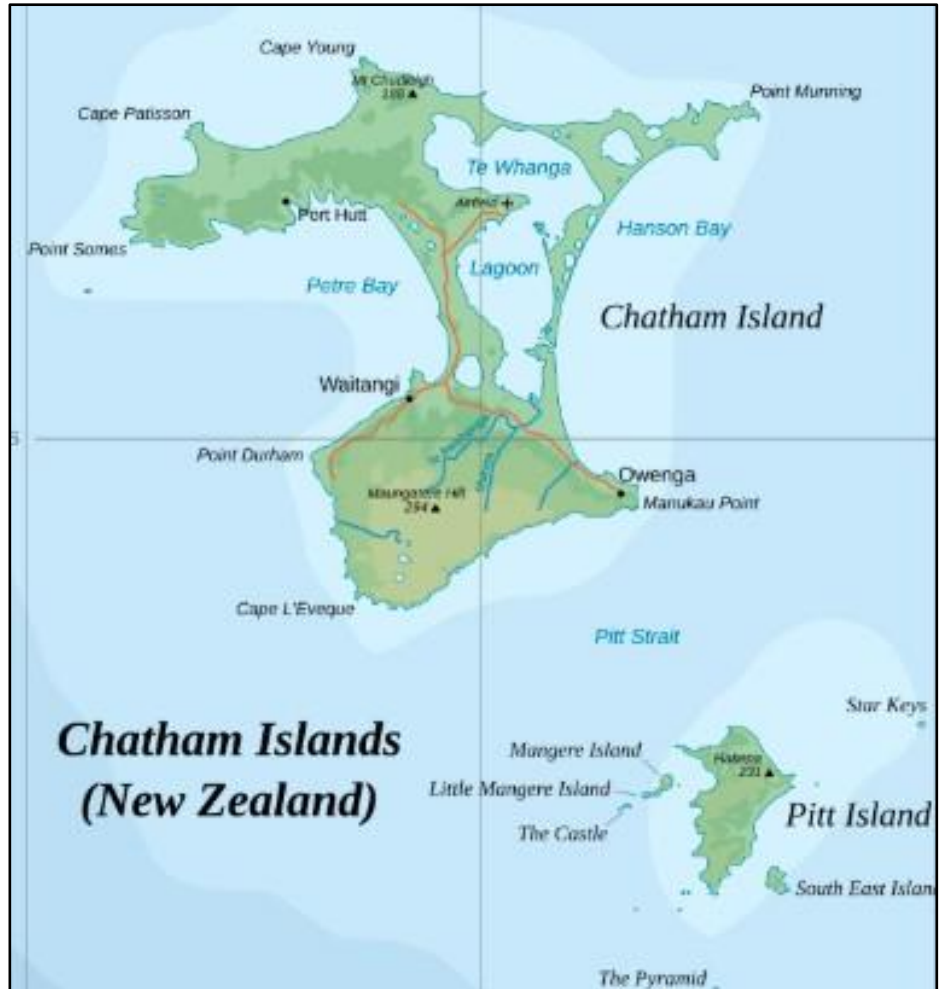

We flew Air Chathams 2.5hrs from Wellington and the first thing we noticed was that the plane was only half full. That is, all the available seats were taken but the other half of the seats were filled with tanks for cray. Obviously, these tanks were empty on the way out but on the way back they were full of cray bound for China and the tanks were to keep them alive as the Chinese prefer. I later found out that they used to export cray tails but now they export the whole cray. Chatham isles are 45minutes ahead of NZ.

One of six containers of Kina gathered in an afternoon of diving. The containers are about 1.2m³

Passengers have to wait whilst the kina are unloaded

The Chathams comprise two inhabited islands, Chatham Island and Pitt Island, and many other smaller islands mostly bird sanctuaries or seal colonies or both. The lagoons are about 2.5m deep, are connected to the sea and are slowly filling up with sand

Chatham island is about 1.6 times the size of Auckland's urban core and has a population of approximately 600 people. These people live on an island with about 180 km of road with only 6 km sealed. Pitt island has about 90 people and 500m of sealed road.

The first thing that hits you when you get there, literally, is the wind. The Chathams are situated in the roaring forties and is blessed/cursed by a reliable Southwest wind. Originally the islands were covered by trees but the early settlers cut most of them down to provide pasture. The islanders are endeavoring to reinstate the trees but they will need millions of trees and there are only 600 of them to plant them. A Chinese company is planting a pine forest for carbon credits.

Koura (Cray) for dinner

Most vehicles are utility vehicles, Utes, SUVs Flat-beds and of course Farm bikes. They all seemed to be carrying cray pots or fishing nets or sheep.

Everything is expensive compared to the mainland, cauliflower is \$10 a head, (and they are grown on the island!), diesel is about \$5 per litre. There is mains electricity, diesel powered and a wind farm of 3 windmills - many people have solar panels.

The Internet is provided by Starlink

Talked to a farmer who had a farm with three dwellings and a covered heated market garden. He had installed a range of 40 solar panels himself. Before the panels were installed diesel cost him \$20,000 per month, (including greenhouse heating). The solar panel installation cost him \$70,000, now his diesel cost is \$2,000 per month used for the days when the 'sun don't shine'.

There is one hotel, Hotel Chatham, (in Waikanae), very comfortable and hospitable and there are a few lodges, motels and homestays. There is one shop that sells almost anything. If you want something else it has to come via the mainland and it can take months

The one shop on the island

Interesting coastline

The history of the island is a mixture of Moriori settlement, Maori invasion, sealers, whalers and gradual settlement. If you want to know more [Ctrl & Click here](#). The New Zealand Company, a British company, tried to sell the islands to the Germans in 1841, (for \$10,000), but the NZ government annexed the islands to stop the sale and

Your typical tourists!

consequently increased NZ's territorial area significantly. Many of the bays and features of the islands are named after people on the board of The New Zealand Company. The Hutt River, Upper and Lower Hutt in NZ is named after the company director, Sir William Hutt, even though he had never been to NZ, yet alone the Chathams.

Is it worth going there? Well, it's not a holiday resort, it's not warm, though the welcome is. It's ok if you take suitable clothes, the wind blows and it rains. We were there of 7 days and the first six were dry, the islanders were beginning to talk about a drought! It's very interesting and I have no regrets at spending a week there. Go on a guided tour and be prepared to do some walking.

A Challenge

I went to Hamilton Gardens, [link to Hamilton Gardens](#), and I do recommend it. I am not a gardener but was amazed and overawed at what I saw. If you want to give your wife/gardener/partner a present take them there – it will win you a lot of brownie points! You could even go on the Northern Explore train.

However, at HG there were several striking garden seats which I think would offer a challenge to the seat makers / repairers in the shed. Here are some examples: Roger C

An English garden seat

Indian garden bed

Carved garden seat, I'm sure the Makerspace guys could help

Carved Egyptian seat, (the seat was made of metal, and so were the lions but I am sure we can get Ray W to make some)

Further around the Shed

- We celebrated last night with a couple of adult beverages Metamucil and Ensure.

Art of Wood EXPO

Sunday 18th Oct, 2pm Baptist Church Hall Te Moana Rd, Waikanae

This is an invitation for all to attend what will be an outstanding amazing exhibition of the very finest woodworking art crafted in New Zealand. Don't miss out...be there.

The Art of Wood is an annual competition run by the National Association of Woodworkers New Zealand where award winners are decided by a panel of international judges with results being announced on the 1st of October.

The Kapiti Woodworkers Guild, which is based at our MenzShed, is an affiliated club to the National association. The commitment and participation by our Kapiti Woodworkers this year has been truly outstanding with in excess of fifty amazing wood creations entered by our members.

Kapiti Woodworkers Guild will be one of the major contributing Guilds across New Zealand. The New Zealand president of the National Association of Woodworkers, Tref Roberts, will be presenting at the Expedition.

The Art of Wood EXPO will have on display the entries from our local Guild and in addition Tref will be bringing for display entries and winning pieces from across New Zealand. We are expecting around eighty pieces on display of which many will be offered for sale.

Some sample entries

The presentation by Tref will be at 2pm following which you will be able to browse the display of first-class wood crafted pieces from across New Zealand.

Afternoon tea will be provided and a gold coin donation to cover costs would be much appreciated. This is a public event, and we are expecting our Mayor and other VIP's to attend along with local media. So MenzShed men and partners, come along and be amazed while supporting the Kapiti Woodworkers Guild event.

Ian Barbour

Wood Turning

the shavings flying as Marcel wet turns the outside of a magnolia bowl while tutor Clive Williams looks on.

The graduates of the recent KWWG wood turning introductory course. They are: Greg Gurau, Michelle Jennings, Marcel van Dorrestein, Cody Theobald

Wood Turning 101

Preamble:

I'll start by saying this was a carefully chosen title and took preference over 'Wood Turning for Dummies'. My wood lathe and I have never been friends. Despite it taking up space in my workshop the only shavings and sawdust around its feet has come from the thicknesser and sanding machine used for making one-off wooden toys with varying levels of complexity from those robust enough to survive abuse in a Day Care Centre, to more technical like a crane truck complete with a wind-out boom which is busy operating up north. Selling these has never really appealed as it would make my time worth about 7 cents an hour, and besides, a hobby is about burning through time and money. So far, a logging truck and tanker have been sold by the Menzshed to raise a few bucks at their garage sale.

I'd never built a concrete mixer truck. Filled with trepidation, I approached a MenzShed lathe with a lump of recycled Rimu from an old door jam, determined to make the concrete mixer bowl. After much encouragement and direction from Ian and Ian I had something that once mounted to the truck, kids with a good imagination would be able to recognize. As a result, I was encouraged to apply to join the KWWG wood turning course. I remember thinking what a great idea and timed to avoid the annual dip into midwinter blues too.

- Now 6 weeks on:

I've learnt that I'm just scratching the surface of wood turning and given say another 10 or 12 years of practice I'll be able to fly solo, but my lathe and I are at least now speaking, and during my mornings at the Menzshed I've been busy making a..... well 'a thing'.

- The Thing:

I started with a block of wood between centres but rather than making something, I was intent on mastering cutting downhill, and bevel rubbing? (I didn't even know it had an itch!). Eventually I'd made the block round using a spindle roughing gouge the use of which initially terrified me (there's just nothing rational about poking a piece of steel that size at a block of spinning wood. Saying like 'Don't poke the bear' leapt to mind).

My fear was next shifted to the parting tool as I'd decided to cut a spigot on each end of The Thing. Why on both ends? Just practice. The spigots were each 10mm long. Why 10mm? well that's how long I could hold my breath while using that tool.

- Lesson Learned:

Start breathing exercises to increase lung capacity OR, relax a little and try to breathe while using the parting tool! After the parting tool episode, the gouge seemed almost friendly, more usable than before. I stuffed a Forstner bit in one end to create an opening. Why? To give it a go. That left me with a spigot on one end and a hollow spigot with a thin rim on the other!

- Lesson Learned:

Just like when we turned the box.... Start with a plan!

Shelving that shaft for the meantime, I started on a foot. Cutting a hole for the shaft's spigot reintroduced me to the Scrapper, I mean Scraper, a tool which in turn made the parting tool seem friendly and the gouge like an old mate!

- Lesson Learned:

There is NO substitute for practice... START WITH A PLAN! And listen to the voice in your head, that's your Sensei saying "just rub the bevel".

Removing the spigot off the foot meant making jam chuck... But making a tight fit with a scraper that seemed intent on removing 1/8 inch at a cut?

- Lesson Learned:

Remember sandpaper is a tool too. And if the holes are too loose just add a layer of toilet paper.

Cutting a 'head' to go on the other end of the shaft now seemed simple,

- Smack an oblong of timber between centres
- Garb my mate the spindle roughing gouge
- Now dance my way back and forward along its length – initially hearing the click, click, click of the corners, becoming a shish, shish as the chips become shavings.

But this dancing with the lathe? I hadn't realized when cutting Left my left hand was at the front of the chisel, cutting right I swapped to right hand at the front. This reduced the hip swaying dance motion I needed. I've put all this down to my puberty years being influenced by DISCO dancing where hip swinging had been replaced by pelvic thrusting.

So what of 'The Thing'? nah it's not really finished yet, it's now been renamed to Mark4

- Thanks:

Despite their difficult to say acronym, KWWG has been AWESOME. Ian Pratt's course has combined theory with lots of hands-on, with the assistance of extremely skilled, and ever so patient tutors I can honestly say 'they've taught me everything I know'. But seriously, what a brilliant six Wednesdays of fun learning. It's been a real privilege to have been selected to attend, receive tuition and interact with such a talented bunch.

Thanks heaps. Marcel – Class of 2026

Ramp for Rehab Gym

Some eighteen months ago Menzshed made a ramp for Exercisewell to enable disabled members to access the gym without assistance. This was made from 32mm ply and was designed to cope with electric wheelchairs which can weigh up to 88kg without anyone in them. This was out in the weather all the time and ramp edge had started to delaminate.

The delaminated ramp edge after 18 month's exposure to weather

An upgraded model was required so a plank 300mm wide and 45mm thick was chosen as suitable to create a ramp 1.1m wide 560mm long and 45mm deep. The plank was easy to cut to size on the dropsaw but unfortunately to cut the bevel was another story. In the end John R and Peter R cut the bevel on the four pieces necessary using handsaws - it only took 5 to 6 hours to do this!!

Then the four pieces were joined together with 3 50mm steel rods at each joint and glued together. Using an electric plane ensured the bevelled ramp was smooth, and then the ramp was complete.

View of top and bottom of new ramp, the blue is left over from the original timber.

Note the consistency of the free hand sawing!!

Several coats of non skid paint were applied and finally the red trim was applied. Here the Shed's graffiti artist alias a retired panel beater (Chris W) showed his spray painting skills.

Then the ramp was installed at Exercisewell and has been earning a number of accolades for a job well done.

Peter R
